

Verification of Welding Certification

The Ontario Building Code, Division B Subsection 4.3.4. and its references to CAN/CSA-S16.1M and CAN/CSA-S136M, requires that all welding done on building components which are required to carry design loads, be done by companies certified by the Canadian Welding Bureau (C.W.B.). Therefore, the companies which do the fabrication and erection of the building components must be certified by the C.W.B. in Division 1 or 2.1. The companies which install and weld the roof deck are to have C.W.B. roof deck welding qualifications.

Project Description:

Project Address:

Date:

For the above noted building, the following companies will be fabricating and erecting the structural steel, fabricating and installing stairs and guards/handrails, and/or installing roof deck. List company name beside each component and corresponding C.W.B. certification level:

Structural Steel:

Fabricators:

Erectors:

Stairs & Guards/handrails:

Roof Deck Installer:

All Welding Inspection reports shall be forwarded, as they are available to the City of Kawartha Lakes Building Department.
