The estimated flood level (Est Fld Lev) is an estimate of the extent of flooding during a Regulatory Flood at the spot elevation. The Est. Fld. Lev. and Spot Elev. are provided for reference purposes only. To determine the exact elevation, reference must be made to the Flood Risk Maps.

18.26.4 Where the zone symbol shown on Schedules A and A1 is followed by the flood plain symbol (F) new buildings or structures with habitable rooms and enlargements or extensions to existing ones with habitable rooms shall only be permitted if the following special provisions are adhered to:

The Ministry of Natural Resources must issue a letter confirming that they concur with the Engineer or Architect before a building permit will be issued. If the Ministry does not respond in writing within

30 days from being requested to respond, then it will be taken that the Ministry concurs with the Engineer's or Architect's opinion.

Such extensions or enlargements are based on the building or structure as it existed on June 27, 1994.
- f. Buildings, structures and access roads that are subject to flooding by the Regulatory Flood should be floodproofed including, but not limited to, the recommendations set out in Appendix '1'.

Floodproofing Measures

To floodproof a building or structure that is subject to flooding by a Regulatory Flood, the following should be undertaken.

- i. The building or structure should be built on piers, piles or posts so that the underside of the floor joists and sill plates supporting all habitable rooms of the building or structure are 0.3 metres (1 ft) above the Regulatory Flood. The support system for the building or structure must be able to resist all of the effects of load influences that are expected from the flood and be designed and certified by a professional engineer or architect to this effect.

Or, alternatively, if a basement is subject to more than 0.3 metres (1 ft) of flooding, the foundation should be cast-in-place concrete designed and constructed so that it will not collapse from the force of the water due to hydrostatic pressures. The basements should have at least two openable windows on opposite sides of the building to allow for the basement to be flooded. The top of the window sills should be no higher than 15 cm (6 in) below grade. The exterior insulation and finished materials must be impervious to water and easy to clean. The insulation should be installed on the exterior of the foundation. The foundation should be designed by a professional engineer or architect and certified by them that it can withstand the hydrostatic pressures.

- ii. Basements should not contain habitable space or be used for the storage of hazardous materials.
- iii. The underside of all floor joists and sill plates supporting habitable rooms should be 0.3 metres (1 ft) above the Regulatory Flood.
- iv. All central heating units including ductwork and water heaters should not be installed below the Regulatory Flood level.
- v. Electrical service panels should be located above the Regulatory Flood Level and any electrical circuits servicing areas below the Regulatory Flood Level must be on separate circuits and be capable of being disconnected.
- vi. The water supply should be safe from contamination and the well casing should extend 15 cm (6 in) above the Regulatory Flood Level, if the well is vented or have the well casing sealed at the top.
- vii. The building or structure should be adequately anchored to the foundation wall or support system.

**MINIMUM DISTANCE SEPARATION (MDS)
CALCULATION SHEET FOR NON-AGRICULTURAL USES**

USES: To determine the required minimum distance separation (MDS) for non-agricultural uses establishing in proximity to livestock facilities.

The following information is to be completed as it relates to livestock operations within 120 metres of the proposed non-agricultural use.

APPLICANT'S NAME: _____ TELEPHONE: _____

ADDRESS: _____ FAX: _____

LOCATION - TOWNSHIP: _____ LOT: _____ CON.: _____

FILE #: _____ DATE: _____ EVALUATOR: _____

ASSESSMENT OF THE LIVESTOCK FACILITY

STEP 1 - TOTAL LIVESTOCK UNITS

To calculate the Total Livestock Units, complete the table below based on the information in Table 1.

COLUMN 1	COLUMN 2	COLUMN 3	COLUMN 4	COLUMN 5
Type of Livestock	Animal Group Table 1	Housing Capacity of Livestock Facility	No. of Animals / Livestock Unit Table 1	No. of Livestock Units Column 3 / Column 4
(A) = Total Livestock Units				(A)

If there are more than 300 livestock units, reference must be made to the full set of tables available from any O.M.A.F.A. office.

STEP 2 - LAND BASE ASSESSMENT (B)

No. of tillable ha on site __ x 5 = ____ (B) Potential Livestock Units (Maximum of (B) is 150 Livestock Units)

STEP 3 - CALCULATIONS

Enter the Greater of (A) Total Livestock Units, from Step 1 or (B) Land Base Assessment, from Step 2:
_____ (Use this figure to enter Column 1 of Table 2)

Minimum Distance Separation req'd from Livestock Facility = _____ m.
(from Table 2)

Actual distance as estimated from livestock facility = _____ m.

Minimum Distance Separation required from Manure Storage = _____ m.
(from Table 3)

Actual distance as estimated from manure storage = _____ m.

STEP 4 - CONCLUSION

if the actual distance separation is less than the required minimum distance separation the application
DOES NOT COMPLY with the By-law.

This application MEETS () DOES NOT MEET () the required MDS for the livestock facility.

¹ Includes calf to 150 kg, ² Multiply the number of milking cows by 1.5 to account for dry cows, heifers and calves on the same farm,

³ Includes offspring until weaned, ⁴ Includes offspring to market size, ⁵ Includes offspring to 4 kg.

Select Animal group 1, 2, 3, 4 or 5, depending on type of animals on farm. If there are animals from different groups, select the highest group number. The group number is used when referring to Table 2.

STEP 4: TABLE 2. MINIMUM DISTANCE SEPARATION FROM LIVESTOCK FACILITY

Read across appropriate line from Column 1 to respective Animal Group and Land Use Type. This number is the Minimum Distance Separation requirement in metres from a livestock facility.

TABLE 3. MINIMUM DIDSTANCE SEPARATION FROM MANURE STORAGE

The following table is used to calculate MDS requirements from manure storages associated with livestock facilities.

Using the resulting MDS distance from Table 2, read across the appropriate line to Column 1, 2, 3 or 4. Select the distance under the appropriate Land Use Type.

This is the MINIMUM DISTANCE SEPARATION REQUIREMENT from the manure storage of a livestock facility for the establishment of a non-farm use.

Column 1: Roofed or covered manure storage. Includes covered concrete and steel tanks, storages under fully slatted floors, in-barn solid manure packs, and roofed manure storages.

Column 2: Open solid manure pile on concrete slab including any associated runoff control and storage.

Column 3: Open concrete or steel tank, silo or yard runoff storage.

Column 4: Open, earth-sided storage OR earth-sided storage with concrete floor.
